## Introduction

The following is a submission to the Independent Communications Authority of South Africa (ICASA) with reference to the 'End-User and Subscriber Service Charter Amendment Regulations 2016', for purposes of ensuring greater transparency of communication services and to bring down the cost of communication in South Africa. The submission is made on behalf of amandla.mobi - an organisation with over 148,985 members, with 30,255 petition signatures in support of the submission, and 1187 written submissions. Please find attached all the signatories, along with comments and written submissions.

As an organisation whose work is focused on Black women from low-income communities, the submission focuses particularly on issues affecting the poor, who pay many times more for data than the rich.

In evaluating the proposed Charter, we would urge ICASA to consider the effective prices actually paid by consumers, especially the prices actually paid by consumers on average, low and very low incomes. Research ICT Africa provides high quality data on relative pricing in Africa based on comparing bundles of 1GB. While this is, in our view, a very useful indicator, we would strongly argue for the measures that take account of the practices of low income consumers and that consider, in particular, the pricing of small value data bundles and out of bundle prices which are the prices that particularly affect the poor.

Research<sup>1</sup> conducted by researchers at the Universities of Witwatersrand, Cape Town and Rhodes and published by the highly regarded Institute of Development Studies in the United Kingdom amongst low income consumers suggests that average and low income consumers are purchasing data in much smaller quantities than 1GB. It suggests that these consumers are buying data in quantities as low as 20MB to 30MB. Some of these consumers are using mobile data without buying data bundles.

It is our contention that low income consumers are paying disproportionately high charges and are not seeing benefits of competition in comparison to high income consumers who are able to buy larger quantities of data.

---

**TABLE 1 Prices of selected mobile data bundles from the largest mobile Internet operator (Vodacom)<sup>2</sup>**

<b>Data bundle</b>	<b>Price (R)</b>	<b>Cost (R) per megabyte (MB)</b>
20MB, one day only	5	0.25
250MB, one day only	25	0.10
60MB, one week only	12	0.20
500MB, one week only	59	0.12
<b>15MB, monthly</b>	<b>10</b>	<b>0.66</b>
100MB, monthly	29	0.29
1GB monthly	149	0.15
<b>Out of bundle (using airtime)</b>	<b>n/a</b>	<b>1.50</b>

As TABLE 1 shows, out of bundle prices are ten times higher than prices for 1GB and this in fact *understates* the problem. There is significant competition at the top of the market with promotional offers that offer higher income contract consumers data at 0.03c or less<sup>3</sup>. **This means that those consumers who are using small data bundles or using data ‘out of bundle’ may be paying 50 times what richer consumers are paying.**

This submission therefore covers the following sections of the ‘End-User and Subscriber Service Charter’:

- Expiry of data
- Out of bundle billing
- End-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock.

<sup>2</sup> See <http://www.makingallvoicescount.org/publication/izolo-mobile-diaries-less-connected/> accessed 2 January 2018

## **1. Expiry of data**

On the face of it this appears to be good for all prepaid consumers especially those of low incomes. But this will however not protect users who buy smaller bundles which are depleted in less than 30 days, for example someone buying a 100MB package will not benefit from this extended period of non-expiry. This part of the proposed charter could in fact reduce competition. Cell C and Telkom Mobile in particular offer particular good value bundles with short expiries (e.g. one day or seven days) which are at much better rates than the standard 30 day+ ones (See Table 1 and pricing packages for Cell C and Telkom on their websites). So this could in fact increase costs for some low income consumers.

With this in mind, we cannot not support this proposed regulation in its current form.

## **2. Out of bundle billing and End-users being given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock.**

Out of bundle pricing is untransparent and unfair for low income consumers. The evidence we have presented suggests that the major operators are engaging in conduct that is unfair and anticompetitive in respect of low income consumers. De Lanerolle, Walton and Schoon's research suggests that low income consumers are buying data bundles in the range of R2-R20. Low income consumers who are generally buying airtime and data in very small quantities are particularly susceptible to unintentionally going 'out of bundle'.

Vodacom's recently published quarterly results state that, for prepaid customers in South Africa (which is to say the vast majority of customers) three quarters of Vodacom's income from voice and data came at 'out of bundle' rates. For data this means customers were likely to be paying R1.50 per MB or R1,500 (\$115) per GB.

The automatic transition from in bundle to out of bundle pricing without enabling the consumer to choose whether they wish to continue to use data at prices up to 50 times higher is unfair and exploitative - especially of the poor. The default position should be that consumers must opt in to out of bundle data rather than opt out.

For competition to thrive, we need a diverse economy driven by entrepreneurs. The internet is a powerful tool for all entrepreneurs to promote their product or service, and leverage efficiencies of the digital age. However, because data prices are structured so those with the least income pay the most for data, entrepreneurs from an upper-class background have an unfair advantage getting their enterprise off the ground.

## **3. Key recommendations that would strengthen the 'End-User and Subscriber Service Charter Amendment Regulations 2016':**

- To be more in-line with SIM card validity period and avoid potentially stifling innovative packages that serve low income users, we recommend reducing the proposed expiry period to between 90 to 120 days.
- Entrenching consumer choice as follows, a default opt out for out of bundle data and that EACH TIME a data bundle is close to running out a SMS text be sent offering the consumer the option

to OPT IN to Out of Bundle rates with info on what that rate is. If the operator did not receive a an opt in reply then no airtime should be used and data supply should be cut when the bundle is finished.

- We propose setting a restriction on the maximum difference allowed in pricing per MB between small and large bundles (for bundles of the same or similar duration). For example no more than twice the difference in pricing. However, in this scenario the poor still pay twice as much as those who can afford larger bundles, therefore the ideal position would be no difference in pricing between big and small bundles per MB.

**End.**

Justine	Quince	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng
Wongalethu An	Zozi	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely, Wongalethu Anton Zozi</p>	Western Cape
Kagiso	Makofane	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

Daryl	Brown	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

Zanele	Mauka	Johannesburg	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Mpumalanga
Christo	Snyders	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	KwaZulu-Natal

Marcus	Ross	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape
Jason	Maidment	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng
Brenda	Hallowes	Eastern Cape	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Eastern Cape
Carol	Williams	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

Barry	du Koker	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape
Jojo	Taylor	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

Thanya	Rambau	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Mpumalanga

Zola	Motlwana	Gauteng	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng
Avryl	Lewis	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape
Peter	Tuffin	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS on mobile phones, or email for other devices, or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely, Peter Tuffin</p>	Western Cape

Tlou	Matlala	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

Don	Pearce	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape
Boitumelo	Ditire	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. Abdulkader	Camroodeen	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

Mark	Kerr	Icasa, help us opt in for out-of-bundle rates	<p>As a student with very limited budget it is essential to stretch every rand I have. When a data bundle expires after 30 days when there is still data left over is equal to theft since the data has already been paid for. No other service expires based on time unless it is time that is bought. Data is no sold as time but as quantity and should be valid until that quantity is exhausted. We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng
Sabina	Mokgabudi	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Limpopo

Veli	Vilane	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Mpumalanga

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

Bongani	Mnguni	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Mpumalanga

Andrew	Park	Countrywide Internet Access	<p>Dear Sir / Ma'am</p> <p>I am writing to express my firm opinion that the internet should be as cheaply and easily available as possible to all people in South Africa, and to ask that you continue to push for regulations that move us in this direction.</p> <p>I believe that humans have an innate need to connect and collaborate, and that this is what has made us so successful as a species. Internet access expands our ability to do this, which opens myriad opportunities for education, entrepreneurship, empathy and peacbuilding, political awareness, community self-organising, disaster preparedness and more. We need this far more than service providers need profits.</p> <p>Sincerely,</p> <p>Andrew Park Cape Town</p>	Western Cape

Shaun	Sweet	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Eastern Cape

Maud	Piliso	North West	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	North West

Ntsoaki	Mokori	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Limpopo

Kirsten	McHarry	Kwazulu/Natal	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>

Simon	Mokonyama	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Limpopo

Thabo	Lengopeng	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

Nhlakanipho Si	Khanyile	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	KwaZulu-Natal

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape
Tessa	Michael	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape
Chezylon	Dlezi	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	KwaZulu-Natal

The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

Ahmed	Rajah	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng
Brahm	Meyer	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape
eunice	freeman	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

Tshego	Magana	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

sibusiso	mkhize	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	KwaZulu-Natal

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	KwaZulu-Natal
Michael	Rakgabyane	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

Lorraine	Magda	Western Cape	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

Warren	Eades	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	KwaZulu-Natal

Elsa	Maree	Icasa, help us opt in for out-of-bundle rates	<p>My point of view: Data cannot be taken back as you have paid for it. An example Checkers don't take groceries back at the end of the month you didn't used. If you buy data for 30 days on the 20th of the month, how does the provider calculate 30 days if the data just disappeared Greetings</p>	Gauteng

The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape
Muziwandile	Gabela	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

Godfrey	Shale	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. Peter	Leonard	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>Unexpired data does not "clog up the system" and only presents a small accounting problem which should be as easily managed as unexpired airtime (which IS permitted to roll over for an extended period). There is actually very little, if any, difference between unexpired data and unexpired airtime, therefore to cancel one and not the other is morally and ethically wrong.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Limpopo
Reanetse	Kolisang	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Western Cape

This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	Gauteng

Buyiswa	Maqhekeza	Icasa, help us opt in for out-of-bundle rates	<p>We welcome the amendments that data bundles expire after 3 years after being bought, unless used. This is a step in the right direction to ensure that, as consumers, we get real value for our money.</p> <p>We also urge you to ensure that it is mandatory that we receive notification from our service providers when our bundles are about to run out, and the intervals must show 50%, 75%, 90% and 100% service depletion. The notification must be through an SMS, push notification or any other applicable means.</p> <p>We also ask that you ensure that end-users must be given an option to opt-in or opt-out of being charged out of bundle data rates to avoid bill shock. The most effective means to do this would be to force operators to change their systems so we have to opt in to using data at out of bundle prices when our bundles run out rather than the present arrangement where we are offered the chance of opting out. This would be far more effective than your proposals to make regulators communicate more frequently to us as we run out of data.</p> <p>Yours sincerely,</p>	KwaZulu-Natal

To: MTN, Vodacom, Telkom, Cell C, Dept of Communications, ICASA and the Competition Commission

We the people and consumers of Mzansi are tired of being ripped off by mobile networks. We demand a cut in the cost of data by at least 50% before the 31st December 2017, and for an end to data, airtime and SMS bundles expiring after 30 days. We call on the ICASA, the Portfolio Committee on Telecommunications and Postal Services, the Competition Commission and the National Assembly to force mobile networks to adhere to this demand.

We also note the network coverage advantage MTN and Vodacom have over other networks and the duopoly this allows. We demand that we not be held at ransom because of this. If you fail to act, we will as consumers and citizens use our collective power to take this directly to the National Assembly for Members of Parliament to hear us.

Signed by 30,255 people:

M	Mpshe	Most of the people in South Africa are underprivileged and being able to have data on their phones it's a necessity and not a luxury as it forms part of our daily lives including being able to perform their school work to the best of their ability since well education requires a lot of research in order to complete the daily tasks/homework required on a daily basis. Lebogang	Molopo	In a country where the youth is battling unemployment, data costs only add to the problem. I use data mostly for serious issues like reading the news and job hunting. It is too expensive. I find it hard to keep up. I am a Btech student so I research a lot. How else am I supposed to find information when I need money to use my phone to search for a job so I can make mone? #KuBad	Gauteng

<b>First Name</b>	<b>Last Name</b>	<b>Submission</b>	<b>Province</b>
calvin	sepadi	I signed up for this because just last year, I've realized that monthly I go through about 5GB of data at R399 for all the research and development that I do. Everything I need (i.e. Banking, Shopping, TV, News, Job Applications, Travel etc) is online. It will only make sense for data to be cheaper and accessible for all as the high prices impede on an individuals day-to-day life. These network providers have been scheming off South Africans far too long and we are tired	Gauteng

Heath	White	Access to information is an uplifter and leveller. Mobile service providers charge iniquitous rates that are contributing to South Africa's fall down the world development ladder. We have the second worst internet on the African continent -- only Eritrea has worse internet than we do, and that's because the government doesn't allow the internet. Shame on all those involved in this scalping and repression of the South African people.	Gauteng

Giulietta	Fafak	I makes me mad when commentators talk of the marvels of the digital age and all the great information and resources that are available to us in the 21st century - for most people in South Africa these offerings are not accessible. Data here is way too expensive. Its cost is holding back potentially positive economic developments, like young entrepreneurs, for one thing.	Western Cape

Asandile	Mathamo	I'm a health professional working in a public sector, I use internet a lot to retrieve my patients laboratory results which helps with faster, convenient and efficient services.....if I run out of data which blows up very fast, the patients are forced to wait for laboratory to deliver manually, with resultant unnecessary delay in management and final decision making about the patient and that indirectly increases waiting times in our public health facilities	Eastern Cape
Ilse	Pauw		Western Cape
julius	Tatana		Eastern Cape

Kojo	Arthur	In my opinion access to the internet in the 21st century is a basic human right. How can people therefore exercise that basic right if the telecommunications companies prevent them from doing so through unreasonable and excessive data costs, more so in a developing country such as South Africa. It is therefore important that access to the internet in South Africa is advanced through reduced and sensibly priced data.	Gauteng

Modisagaarekwe	Moncho	The poorest of the poor in rural areas they have access to crucial information , simply because they don't have money to buy data . When you compare R22 with R155 you will find that there is a huge difference , meaning that our data in this country is too expensive compared to other countries . People around rural areas can't afford because unlike those in SANDTON , they are the poorest of the poor . Down with exorbitant prices of data !!!	North West

Bee	Sogobile	I fully support the Data Must Fall campaign, because a lot of us young people are not able to have full access to the internet, without the actual data depleting within a day! which then consumes most of our pocket monies by buying more gigs of data to have full access to internet. If prices could decrease, at least there will be a huge difference in our country!	Western Cape

Belinda	Eagleton	Your info is incorrect. I went to Nam in Aug & its NOT R23 for 1GB. Data in nam is very expensive, it's R79 for 420mbs & charge Tax on airtime. Also airtime/data runs out super quickly in Namibia. You can getpackages data for cheap. mtn R89 for 1 GB. Telkom data for cheap & where you can connect to free wifi, Afrihost 250mbs of data for R1 every month. Axxess is also a partner with mtn R495 for 10Gbs It carries ocer for 3 months.	Eastern Cape

Bright	Manganye	Data is too expensive, I can't do my school work properly because data gets finished quickly. Spend lots of money on data and it doesn't even last.	Gauteng
Mareka	Monyokolo	End the digital divide, as well as the greed that characterize our mobile telephony service providers. Further, to pressure the toothless ICASA and the Communication Department to do their work, i.e. ensure universal access to ICT and protect and promote our interests in this regard!

Carl	Johnson	government is to blame by not implementing the digital migration of television which has kept the spectrum for data transmission small, slow and expensive. The likes of MTN and Vodacom are just cashing in. The examples of the cost of data in other countries is not accurately expressed in that there is also so much free access in places of public gathering and institutions in many developed and developing countries your require,net for personal data airtime is actually very small. Thabisile	Khaba	Its costing too much on top im deaf i dont use voice calls , its killing me all my money is gone within 3 weeks . I'm using data for ad of my small business to grow I'm a chef hence I lost work it the only tool to show case my work and get more knowledge to other business I see in networking .The update of news the scenario that affect the students in feesmustfall its a social impact to us . while in our country the data its so expensive to other countries it cost less . Masego	Modisane	I have a lot of assignments and schoolwork to do that requires hardcore research and the Internet does help a lot, however the amount of data I have to buy to last me for the whole month is really expensive. I can't deal with having to buy 1GB of data for R149 when other networks charge you about R99 for the same amount of data. And it never really last's for the whole month because of the workload and time I spend on the Internet doing my work and accessing my school database. #DataMustFall	Gauteng

Liza	Xayimpi	It's bad enough that our universities are crap expensive. But with lower data charges, at least people can take short online courses while the movement is still going for FMF. Let's support educating our citizens. (Not mentioning the fact that we all need data and the internet for assignments and projects. No project nowadays does not need extra research). Viva education!

For change to take place on a business, educational and community level people need to talk to each other but not at the exorbitant costs we currently experiencing....There are so many examples of how it impacts the poorest communities in establishing and maintainino relationshipso. Eg. Parent to School communication	Western Cape

Perseus	Drew	I bought 3Gigs of data. The next thing is I'm experiencing bad data network. I only used less than 1 gig because of network that time. The remaining 2 gigs just vanished because the expiry date was due. Why would something like data expire? At least better the service so we utilise all our data in time. All complains just go down the drain at all customer service centers. Particularly @vodacom and MTN.	Gauteng

Mxolisi	Mahlangu	The use of internet is very imperative as it helps us interact globally. Through internet we are able to share useful information i.e Job vacancies. The costs incurred when accessing the internet are inevitably too high making it difficult for most of us to use it, thus I support the call for lowering the cost of data. #data_must_fall	Mpumalanga

Anne	Taylor	Our country must have the highest data costs in the world. In China, I did not pay a lot per month for data for what I got. I used Google Maps and translation apps constantly, watched films and never ran out of data - ever. And here you even lose your data if you don't use it up in time. Let's think of the youth and building up our country. We simply can't have a handful of CEOs sitting with a couple of million for overcharging us. #DataMustFall	Western Cape

Ntando	Ngcobo	One of the barriers to education and the betterment of South African society is the lack of access to information. The exorbitant prices of data exclude many from the ability to access information and data and thus perpetuate the divisions left by the former regime. This needs to change.

sizwe	Ntimane	Data is really expensive, when accessing internet on my phone i have to buy those 1 hour data deals because they are "kind" of cheap to browse internet. but still i need to use my airtime mean while i still have a monthly active data. I was not aware that data was expensive till i found out the comparison with other countries.	Free State

Tebogo	Mashaba	I spend almost a thousand on data whether am just using social media or doing school research and am just a first year student. This is insane, I can't stay at school for assignments or study till late, I mean I stay far from school and I use a taxi to travel, clearly this is not safe for a girl to walk alone even with peers at night? it is not safe period! Data must fall indeed it is supposed to be cheaper than airtime for goodness sake!	Limpopo

Anna-Mari	Pieterse	We the people and consumers of Mzansi are tired of being ripped off by mobile networks. We demand a cut in the cost of data by at least 50% before the 31st December 2017, and for an end to data, airtime and SMS bundles expiring after 30 days. We call on the ICASA, the Portfolio Committee on Telecommunications and Postal Services, the Competition Commission and the National Assembly to force mobile networks to adhere to this demand. Kay-Leigh	O'Hagan	I don't get what I pay for on my contract with cell c. Data doesn't even make it through to the next day once! And my mobile data remains off until I need to use it. Where the heck does it disappear to? And what the heck am I paying double for every month? Having to continually load data by the second day of each month. I need to load data at least 4 times a month. Absolute rubbish and it's theft and super unethical in my eyes and I'm sure a lot of other unhappy customers.	Eastern Cape

Phumlani	Krakra	my network reaped me off many times, i loaded airtime, purchased bundles and made calls and a ballance remains. then comes these promotions that give you data and airtime wat they do is use the data and airtime you purchase and leave the one they gave free to to u, come the middle of the night when it expires, everything is gone. poof! and, the data itself is expensive and is quickly spent like there's some phantom you using ur phone when ur not. it's not ok, tiz wrong	Eastern Cape
